

ALM-1912

GPS Filter–LNA Front–End Module

Data Sheet

Description

Avago Technologies' ALM-1912 is a GPS front-end module that combines a GPS FBAR filter with high-gain low-noise amplifier (LNA). The LNA uses Avago Technologies' proprietary GaAs Enhancement-mode pHEMT process to achieve high gain with very low noise figure and high linearity. Noise figure distribution is very tightly controlled. A CMOS-compatible shutdown pin is included either for turning the LNA on/off or for current adjustment. The filter uses Avago Technologies' leading-edge FBAR filter for low GPS band insertion loss and exceptional rejection at Cellular, PCS and WLAN band frequencies.

The low noise figure and high gain, coupled with low current consumption make it suitable for use in critical low-power GPS applications or during low-battery situations.

Surface Mount 2.9 x 2.0 x 0.95 mm³ 9-lead MCOB

Note:
Package marking provides orientation and identification
"1912" = Product Code
"YY" = Year of manufacture
"WW" = Work week of manufacture

Features

- Very Low Noise Figure
- Exceptional Cell/PCS/WLAN-Band rejection
- Low external component count
- Fully-matched at RF input and RF output
- Shutdown current : < 1 uA
- CMOS compatible shutdown pin (SD)
- ESD : > 3kV at RFin pin
- 2.9 x 2.0 x 0.95 mm size
- Adjustable bias current via single external resistor/ voltage
- Lead-free and Halogen free

Specifications (Typical performance @ 25°C)

At 1.575GHz, Vdd = 2.7V, Idd = 6mA

- Gain = 19.3 dB
- NF = 1.62 dB
- IIP3 = +1.5 dBm
- IP1dB = -8 dBm
- S11 = -9.5 dB
- S22 = -13.5 dB
- Cell-Band Rejection: > 57dBc
- PCS-Band Rejection: > 53dBc
- WLAN-Band Rejection: > 52dBc

Application

- GPS Front-end Module

Notes

- The module is fully matched at the input and output RF pins. Both these pins also have built-in coupling and DC-blocking capacitors. Best noise performance is obtained using high-Q wirewound inductors. This circuit demonstrates that low noise figures are obtainable with standard 0402 chip inductors.
- C2 and L2 form a matching network that affects the frequency response and linearity of the LNA, these can be tuned to optimize gain and return loss.
- L1 and R1 isolates the demoboard from external disturbances during measurement. It is not needed in actual application. Likewise, C1 and C3 mitigate the effect of external noise pickup on the Vdd and Vsd lines respectively. These components are not required in actual operation.
- Bias control is achieved by either varying the Vsd voltage with/without R2, or fixing the Vsd voltage to Vdd and adjusting R2 for the desired current. R2 = 4.7Kohm will result 6mA when Vdd = Vsd = 2.7V. R2 = 2.7Kohm for 4mA when Vdd = Vsd = 1.8V & R2 = 15Kohm for 4mA when Vdd = Vsd = 2.8V.

Notes:

The exceptional noise figure performance of the ALM-1912 is due to its highly optimized design. In this regard, the Fmin of the ALM-1912 shown above is locked down by the internal input pre-match. This allows the use of relatively inexpensive chip inductors for external matching.

The diagram illustrates the components and feed direction of a microfilm reel. On the left, a perspective view shows a reel with a carrier tape and cover tape. The right side shows a top view and end view of the carrier tape, indicating the user feed direction.

The technical drawing shows a cylindrical component with a cross-section labeled "SECTION A - A". The main view is a side elevation showing a series of ten circular features along the top edge, each with a center mark. Below these are five rectangular features, also with center marks. Dimensions include a total length of $12.0 + 0.3 / - 0.1$, a diameter of $\varnothing 1.5 \pm 0.1 / - 0.0$, and a minimum hole diameter of $\varnothing 1.50 \text{ MIN.}$. Section A-A is shown as a vertical cut through one of the rectangular features, revealing a U-shaped profile with a radius of $R0.25$ at the bottom. Other dimensions for section A-A include a width of 0.30 ± 0.05 , a maximum fillet radius of $R0.20 \text{ MAX.}$, and a thickness of Ko . Additional dimensions for the main body include a distance of 8.00 between the first two circular features, a distance of 4.00 from the left edge to the first circular feature, and a distance of 1.75 ± 0.10 from the right edge to the last circular feature. A dimension of 5.50 ± 0.05 is given for the distance from the bottom edge to the center of the rectangular features. A note indicates that dimensions 2.00 ± 0.05 and 4.00 refer to specific notes.
