An ON Semiconductor Company

LV8400V — Bi-CMOS IC Forward/Reverse Motor Driver

Overview

The LV8400V is a 1-channel motor driver IC using D-MOS FET for output stage and operates in one of the four modes under program control: forward, reverse, brake, and standby.

As the P/N-channel structure is used in the H-bridge output stage, the LV8400V features minimal number of external component and low on-resistance (0.33Ω typical). This IC is optimal for driving motors that need large-current.

Functions

- 1-channel forward/reverse motor driver
- Low power consumption
- Low output ON resistance 0.33Ω
- Built-in constant current output circuit
- Built-in low voltage reset and thermal shutdown circuit
- Four mode function forward/reverse, brake, standby.

Specifications

Maximum Ratings at $T_a = 25^\circ\text{C}$, SGND = PGND = 0V

Parameter	Symbol	Conditions	Ratings	Unit
Power supply voltage (for load)	V_M max		-0.5 to 16.0	V
Power supply voltage (for control)	V_{CC} max		-0.5 to 6.0	V
Output current	I_O max	DC	1.2	A
	I_O peak1	$t \leq 100\text{ms}$, $f = 5\text{Hz}$	2.0	A
	I_O peak2	$t \leq 10\text{ms}$, $f = 5\text{Hz}$	3.8	A
	I_{OUT} max	DC	30	mA
Input voltage	V_{IN} max		-0.5 to $V_{CC}+0.5$	V
Allowable power dissipation	P_d max	Mounted on a specified board *	800	mW
Operating temperature	T_{opr}		-20 to +85	$^\circ\text{C}$
Storage temperature	T_{stg}		-55 to +150	$^\circ\text{C}$

* Specified board : 30mm × 50mm × 1.6mm, glass epoxy board.

Caution 1) Absolute maximum ratings represent the value which cannot be exceeded for any length of time.

Caution 2) Even when the device is used within the range of absolute maximum ratings, as a result of continuous usage under high temperature, high current, high voltage, or drastic temperature change, the reliability of the IC may be degraded. Please contact us for the further details.

■ Any and all SANYO Semiconductor Co.,Ltd. products described or contained herein are, with regard to "standard application", intended for the use as general electronics equipment. The products mentioned herein shall not be intended for use for any "special application" (medical equipment whose purpose is to sustain life, aerospace instrument, nuclear control device, burning appliances, transportation machine, traffic signal system, safety equipment etc.) that shall require extremely high level of reliability and can directly threaten human lives in case of failure or malfunction of the product or may cause harm to human bodies, nor shall they grant any guarantee thereof. If you should intend to use our products for new introduction or other application different from current conditions on the usage of automotive device, communication device, office equipment, industrial equipment etc. , please consult with us about usage condition (temperature, operation time etc.) prior to the intended use. If there is no consultation or inquiry before the intended use, our customer shall be solely responsible for the use.

■ Specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.

LV8400V

Allowable Operating Conditions at Ta = 25°C, SGND = PGND = 0V

Parameter	Symbol	Conditions	Ratings	Unit
Power supply voltage (for load)	VM		4.0 to 15.0	V
Power supply voltage (for control)	VCC		2.7 to 5.5	V
Input signal voltage	VIN		0 to VCC	V
Input signal frequency	f max	Duty = 50%	200	kHz

Electrical Characteristics Ta = 25°C, VCC = 5.0V, VM = 12.0V, SGND = PGND = 0V, unless otherwise specified.

Parameter	Symbol	Conditions	Remarks	Ratings			Unit
				min	typ	max	
Standby load current drain 1	IMO1	EN = 0V	1			1.0	μA
Standby load current drain 2	IMO2	EN = 0V, VCC = 0V, Each input pin = 0V	1			1.0	μA
Standby control current drain	ICO	EN = 0V, IN1 = IN2 = 0V	2			1.0	μA
Operating load current drain 1	IM1	VCC = 3.3V, EN = 3.3V	3		0.35	0.70	mA
Operating load current drain 2	IM2	VCC = 5.0V, EN = 5.0V	3		0.35	0.70	mA
Operating current consumption 1	IC1	VCC = 3.3V, EN = 3.3V	4		0.6	1.2	mA
Operating current consumption 2	IC2	VCC = 5.0V, EN = 5.0V	4		0.8	1.6	mA
High-level input voltage	VIH	$2.7 \leq V_{CC} \leq 5.5V$		$0.6 \times V_{CC}$		VCC	V
Low-level input voltage	VIL	$2.7 \leq V_{CC} \leq 5.5V$		0		$0.2 \times V_{CC}$	V
High-level input current (EN, IN1, IN2, ICTRL)	IiH	VIN = 5V	5	12.5	25	50	μA
Low-level input current (EN, IN1, IN2, ICTRL)	IiL	VIN = 0V	5	-1.0			μA
Pull-down resistance value (EN, IN1, IN2, ICTRL)	RDN			100	200	400	kΩ
Output ON resistance	RON	Sum of top and bottom sides ON resistance. $2.7V \leq V_{CC} \leq 5.5V$	6		0.33	0.5	Ω
Constant current output leakage current	IOLEAK	EN = 0V	7			1.0	μA
Output constant current	IOUT	RSET = 40Ω, Internal reference = 0.2V	8	4.65	5.00	5.35	mA
ISET pin voltage	VISET	RSET = 40Ω	9	0.186	0.20	0.214	V
Constant current output ON resistance	RONIO	RSET = 0Ω, IO = 5mA	10		20	30	Ω
Low-voltage detection voltage	VCS	VCC voltage	11	2.10	2.25	2.40	V
Thermal shutdown temperature	Tth	Design guarantee *	12	150	180	210	°C
Output block	Turn-on time	TPLH	13		0.5	1.0	μs
	Turn-off time	TPHL	13		0.5	1.0	μs

* Design guarantee value and no measurement is performed.

Remarks

1. Current consumption when output at the VM pin is off.
2. Current consumption at the VCC pin when in all function stop.
3. Current consumption at the VM pin when EN is high.
4. Current consumption at the VCC pin when EN is high.
5. These input pins (EN, IN1, IN2, and ICTRL) have an internal pull-down resistor.
6. Sum of the top and bottom side output on resistance.
7. Leakage current when the constant current output is off.
8. Current value that is determined by dividing the internal reference voltage (0.2V) by RSET.
9. ISET pin voltage when the constant current output block is active.
10. ON resistance value of the constant current output block.
11. All output transistors are turned off if a low-voltage is detected.
12. All output transistors are turned off if the thermal protection circuit is activated. They are turned on again as the temperature goes down.
13. Rising time from 10 to 90% and falling time from 90 to 10% are specified.

Pin Assignment

Block Diagram

Truth Table

EN	IN1	IN2	OUT1	OUT2	Mode
H	H	H	L	L	Brake
	H	L	H	L	Forward
	L	H	L	H	Reverse
	L	L	Z	Z	Standby
L	-	-	Z	Z	All function stop

EN	ICTRL	IOUT	Mode
H	H	ON	Constant current ON
	L	Z	Constant current OFF
L	-	Z	All function stop

- : denotes a don't care value. Z : High-impedance

- Current drain is zero in all function stop mode. (excluding the current that flows out of the EN pin)
- * All power transistors turn off and the motor stops driving when the IC is detected in low voltage or thermal protection mode.

Pin Functions

Pin No.	Pin name	Description	Equivalent circuit
9 16	VM	Motor block power supply. (Both pins must be connected)	
1	V _{CC}	Logic block power supply.	
4	EN	Logic enable pin. (Pull-down resistor incorporated)	
2 3 5	IN1 IN2 ICTRL	Driver output switching. (Pull-down resistor incorporated)	
10 11 14 15	OUT1 OUT2	Driver output.	
6 8	ISET IOUT	Constant current output.	
7	SGND	Logic block ground.	
12 13	PGND	Driver block ground. (Both pins must be connected)	

Sample Application Circuit

- *1 : Connect a kickback absorbing capacitor as close as possible to the IC. Characteristics deterioration of the IC or damage may result if an instantaneous voltage surge exceeding the maximum rated value is applied to the VM line due to coil kickback or other causes.
- *2 : The output constant current (I_{OUT}) is determined by the internal reference voltage and the sense resistor between the ISET and SGND pins.

$$I_{OUT} = \text{Internal reference voltage (0.2V)} \div \text{Sense resistor (RSET)}$$

From the formula above, $I_{OUT} = 5\text{mA}$ when a sense resistor of 40Ω is connected between the ISET and SGND.

- SANYO Semiconductor Co.,Ltd. assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO Semiconductor Co.,Ltd. products described or contained herein.
- SANYO Semiconductor Co.,Ltd. strives to supply high-quality high-reliability products, however, any and all semiconductor products fail or malfunction with some probability. It is possible that these probabilistic failures or malfunction could give rise to accidents or events that could endanger human lives, trouble that could give rise to smoke or fire, or accidents that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO Semiconductor Co.,Ltd. products described or contained herein are controlled under any of applicable local export control laws and regulations, such products may require the export license from the authorities concerned in accordance with the above law.
