

MSA-0600

Cascadable Silicon Bipolar MMIC Amplifier

Data Sheet

Description

The MSA-0600 is a high performance silicon bipolar Monolithic Microwave Integrated Circuit (MMIC) chip. This MMIC is designed for use as a general purpose 50 W gain block. Typical applications include narrow and broad band IF and RF amplifiers in commercial, industrial and military applications.

The MSA-series is fabricated using HP's 10 GHz f_T , 25 GHz f_{MAX} , silicon bipolar MMIC process which uses nitride self-alignment, ion implantation, and gold metallization to achieve excellent performance, uniformity and reliability. The use of an external bias resistor for temperature and current stability also allows bias flexibility.

The recommended assembly procedure is gold-eutectic die attach at 400°C and either wedge or ball bonding using 0.7 mil gold wire.^[1] See APPLICATIONS section, "Chip Use".

Typical Biasing Configuration

Features

- Cascadable 50 Ω Gain Block
- Low Operating Voltage (3.5 V typical V_d)
- 3 dB Bandwidth: DC to 1.0 GHz
- High Gain: 19.5 dB Typical at 0.5 GHz
- Low Noise Figure: 2.8 dB Typical at 0.5 GHz

Chip Outline [1]

Note:

1. This chip contains additional biasing options. The performance specified applies only to the bias option whose bond pads are indicated on the chip outline. Refer to the APPLICATIONS section "Silicon MMIC Chip Use" for additional information.

MSA-0600 Absolute Maximum Ratings

Parameter	Absolute Maximum ^[1]
Device Current	50 mA
Power Dissipation ^[2,3]	200mW
RF Input Power	+13dBm
Junction Temperature	200 °C
Storage Temperature	-65 to 200 °C

Thermal Resistance ^[2,4] :

$$\theta_{jc} = 50^{\circ}\text{C/W}$$

Notes:

1. Permanent damage may occur if any of these limits are exceeded.
2. T_{Mounting Surface} (T_{MS}) = 25°C.
3. Derate at 20 mW/°C for T_{Mounting Surface} > 190°C.
4. The small spot size of this technique results in a higher, though more accurate determination of θ_{jc} than do alternate methods.
See MEASUREMENTS section "Thermal Resistance" for more information.

Notes:

1. The recommended operating current range for this device is 12 to 30 mA.
Typical performance as a function of current is on the following page.
2. RF performance of the chip is determined by packaging and testing 10 devices per wafer in a dual ground configuration.
