1	Operating Temperature Range	5C : -55°C to +125°C	R7 : -55°C to +125°C F5 : -30°C to +85°C																						
2	Rated Voltage	See the previous pages.			The rated voltage is defined as the maximum voltage which may be applied continuously to the capacitor. When AC voltage is superimposed on DC voltage, V^{P-P} or V^{O-P} , whichever is larger, should be maintained within the rated voltage range.																				
3	Appearance	No defects or abnormalities			Visual inspection																				
4	Dimension	Within the specified dimensions			Using calipers																				
5	Dielectric Strength	No defects or abnormalities			No failure should be observed when 300% of the rated voltage (5C) or 250% of the rated voltage (R7, F5) is applied between the terminations for 1 to 5 seconds, provided the charge/discharge current is less than 50mA.																				
6	Insulation Resistance	More than 10,000MΩ or 500Ω • F (Whichever is smaller)			The insulation resistance should be measured with a DC voltage not exceeding the rated voltage at 25°C and 75%RH max. and within 2 minutes of charging.																				
7	Capacitance	Within the specified tolerance			The capacitance/Q/D.F. should be measured at 25°C at the frequency and voltage shown in the table.

18	High Temperature Load	The measured and observed characteristics should satisfy the specifications in the following table.			<p>Apply 200% of the rated voltage for 1000 ± 12 hours at the maximum operating temperature $\pm 3^\circ\text{C}$. Let sit for 24 ± 2 hours (temperature compensating type) or 48 ± 4 hours (high dielectric constant type) at room temperature, then measure. The charge/discharge current is less than 50mA.</p> <ul style="list-style-type: none"> Initial measurement for high dielectric constant type. <p>Apply 200% of the rated DC voltage for one hour at the maximum operating temperature $\pm 3^\circ\text{C}$. Remove and let sit for 48 ± 4 hours at room temperature. Perform initial measurement.</p>
